**Liftra collaborates with HMM to develop offshore major component exchange solution.**

Liftra ApS from Aalborg, Denmark (“Liftra”) and HMM Holding B.V. (“HMM”), through its affiliate MHWirth AS, have agreed to jointly develop a new major component exchange solution for offshore wind turbines. By leveraging Liftra’s extensive wind industry experience and HMM’s long-lasting offshore legacy, this collaboration aims to enhance the efficiency of offshore service operations.

This solution marks the beginning of Liftra’s and HMM’s collaboration, highlighting the shared goals and framework for delivering sustainable and competitive solutions for the offshore wind industry.

This innovative solution integrates Liftra’s LT1200 Self-Hoisting Crane technology with HMM Heave Compensation technology, designed to facilitate service operations for offshore supply vessels.

**Per Eske Fenger, CEO of Liftra comments:**

“We are pleased to enter this collaboration with HMM to develop a cutting-edge solution for the maintenance of offshore wind turbines. Liftra and HMM share the ambition of providing the wind industry with sustainable and efficient solutions. Our core focus at Liftra is to develop more innovative solutions for the wind industry, which are designed to maximize quality of operations, sustainability, and cost competitiveness. With HMM’s and Liftra’s offshore expertise, we are confident that this solution will play a key role in offshore maintenance operations.”

**Pål Skogerbø, Chief Technology Officer HMM comments:**

“We are excited about the collaboration with Liftra, where we leverage HMM’s vast experience in handling solutions and heave compensation for challenging offshore environments. We share a vision with Liftra to develop a safer and more efficient maintenance system for offshore wind turbines. This collaboration exemplifies our complementary strengths, driving sustainable and competitive solutions for the offshore wind industry.”

**About Liftra:**

Liftra ApS is a globally recognized corporation specializing in lifting and transportation solutions for the wind energy industry. With over 20 years of experience, Liftra designs, engineers, manufactures, and delivers tailor-made, innovative solutions. These solutions support the efficient and sustainable installation, maintenance, and transportation of both onshore and offshore wind turbines.

Liftra technology has been applied offshore for more than 10 years, while the Liftra Self-Hoisting Crane has successfully conducted offshore major component exchanges since 2022. With offshore operations conducted globally we supply the wind energy industry with cutting-edge solutions and services.

**About HMM:**

HMM is a premier solutions provider for the drilling, construction and mining industry. It was formed as an independent company in October 2021 through the merger of Baker Hughes' (NYSE: BKR) Subsea Drilling Systems business and Akastor ASA's wholly owned subsidiary, MHWirth AS.

With a strong legacy in the offshore oil and gas business and well-established construction solutions, HMM drives innovative developments for the offshore wind industry.

HMM aims to support the industry's transition toward more energy-efficient solutions, as well as deploying technologies and service solutions to make the sector more competitive.
